PROJECT

Masterplan & Feasibility Study

National Construction College

Feilden+Mawson's design for a proposed new village and redevelopment of the College's training facilities at the National Construction College at Bircham Newton, North Norfolk.

The proposal for the village follows traditional North Norfolk village development forms and densities, with a village green at the heart of the development. The college facilities, including a new administration block, reception, sports hall, swimming pool, club and student bedrooms, are linked through a series of routes and defined courtyards.

The scheme offers the opportunity to introduce the latest technologies and materials within the Construction Industry, whilst also leading the way in reducing energy use and introducing alternative sources of energy.

These proposals have been successful in helping the college gain funding from the Learning Skills Council.
